### Works Cited

Brown, Cheryl L. Review of *The Immortal Life of Henrietta Lacks*, by Rebecca Skloot. *Journal of Health Politics, Policy and Law*, vol. 37, no. 6, Dec. 2012, pp. 1141–46. *EBSCOhost*, doi: 10.1215/03616878-1813900.

Type: book review.

Skloot's book examines the life of Henrietta Lacks, an African-American woman who died in 1951, and the history of the cancer cells that were taken from her, used extensively for nearly seventy years in modern medical research.

Goulson, Dave. *Bee Quest: In Search of Rare Bees*. Vintage, 2018.

Type: non-academic, authoritative resource.

Dave Goulson, professor of biology at the University of Sussex, writes a book for a popular audience about his research into bees, where each chapter focusses on the flora and fauna related to bees in a particular region of the globe.

Woodcock, B. A., et al. "Enhancing Floral Resources for Pollinators in Productive Agricultural Grasslands." *Biological Conservation*, vol. 171, 2014, pp. 44–51. *Elsevier*, [reader.elsevier.com/reader/sd/pii/S0006320714000251](http://reader.elsevier.com/reader/sd/pii/S0006320714000251).

Type: peer-reviewed, original academic study.

The academic study argues that in order to promote the populations of bees and other pollinators in northern Europe, a simple solution is to sow seed mixtures into pre-existing grasslands, especially those that combine legumes and non-leguminous forbs (non-grass-like plants).
